

Product

BG-110 Latching Float Switch for Metal Secondary Pan

Purpose

The Asurity® BG-110 protects the HVAC circuit by eliminating intermittent condensate tripping with a latching snap action. The switch attaches to the side of metal secondary drain pans, and clamps in place for a secure hold,

Once the latch mechanism is triggered, the power to your air handler will be interrupted, and the system will shut down. The BG-110 will stay latched and the system will remain off, even if the water has receded, until manually reset. This eliminates any intermittent condensate tripping, minimizing wear on systems and making diagnoses easier.

Features

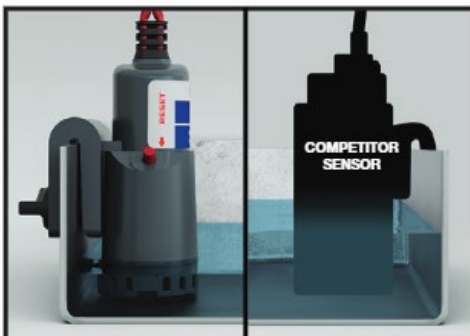

- Easily installs on most metal drain pans
- Trips in 50% less water than most competitive switches
- Latching mechanism eliminates intermittent condensate tripping
- The system will remain off, even if the water has receded, until manually reset

General Specifications

- Minimum trigger depth 1/2"
- Voltage: 24VAC
- Amperage: Up to 4 amps
- 72 in. Wire
- Conforms to UL 508

General Characteristics

Part Number	Product Description	UPC	Order Multiple
BG-110	Latching Switch-Metal Pan	0095247199952	20

Minimum Trigger Depth is 1/2"

Latches When Triggered. Manual Reset

Secure with Thumb Screws
