

Product

Heavy Duty High Rise Pan™

Purpose

Asurity™ Heavy Duty High Rise Pan is a plastic drain pan design which allows placement of an air handler 2" above the outside lip of the pan and a total of 4-1/4" of lift from the bottom of the pan.

Features

The Heavy Duty High Rise Pan™ is constructed of a 1/8" thick heavy duty ABS plastic material that is 80% thicker than standard pans and is designed with a bevy of well positioned reinforcements and risers. These reinforcements and risers allow for a strong, durable drain pan that can hold a wide variety of air handlers 4-1/4" higher than normal pans. Molded-in depressions in the risers make a perfect mounting point for anti-vibration pads, which means quiet operation. The one-piece construction makes the pan nestable with other pans. It is also resistant to splitting, leaking, and cracking.

Included Equipment

- CS1200 float switch
- 6 E.V.A. Anti-Vibration Pads
- 1 3/4" PVC male adapter

Specifications

Nominal Thickness:	0.125"
Material:	ABS
Rise:	4-1/4"
Heat distortion temperature ASTM 648	199°F @ 264 psi 211°F @ 66 psi
Flexural strength: ASTM 790	9,300 psi
Tensile strength: ASTM 638	5,300 psi
Load support:	800 lb*

*All loads must be evenly distributed. For hanging weight loads, the hanging supports must be under the footprint of the equipment being supported.
